New Product Announcement

Rodent Repellant Cabling Option – SLX Submersible Transducers

Contegra now offers the SLX 130 Submersible Level Transducer with an optional "Rodent Repellant" [Ropellant™] cable. Ropellant™ cable is available for use with Contegra's two-wire, loop powered milli-amp transducer (i.e. the SLX 130-M or the SLX 130-MIS).

Like Contegra's standard SLX 130 cable, the Ropellant™ cable contains a breather tube, a foil shield w/drain wire and a Kevlar® strengthening member. However, the Ropellant™ cable contains two insulated conductors and a TPE (Thermoplastic elastomer) jacket. The TPE jacket contains an additive which rodents find to be distasteful/repugnant.

The Ropellant™ cable's thicker TPE jacket provides excellent electrical isolation. In fact, the Ropellant™ cable's ability to withstand surges [i.e. the cable's "breakdown voltage"] is superior to the SLX 130's standard three-conductor FEP jacketed cable.

Ordering the SLX 130 with the Rodent Repellant cable:

Customers may order the SLX 130 with either the Teflon® (i.e. FEP) or the Ropellant™ jacketed cable. The desired jacketing is denoted by the letter 'T' (Teflon) or 'R' (Ropellant) as a suffix to the cable length.

Example: SLX 130-M-10-50T-B (emphasis added) **Example:** SLX 130-M-10-50R-B (emphasis added)

Includes:

- **SLX 130** submersible transducer
- **M** = 4-20 mADC output
- **10** PSI pressure sensing element
- **50** feet of Teflon® (i.e. FEP) signal cable
- **B** = Sealed Breather System.

Includes:

- **SLX 130** submersible transducer
- **M** = 4-20 mADC output
- **10** PSI pressure sensing element
- **50** feet of Ropellant™ signal cable
- **B** = Sealed Breather System.

Notes:

1. The SLX 130-E/Ek requires three conductors. Therefore only the 'T' selection is available for the SLX 130-E/Ek.

Please call your Contegra Representative for additional information.
